## Claims:

5

1	1.	A safety indicator comprising:
2		a. a first safety color highly visible to an observer having ordinary color
3		vision; and
4		b. a second color more perceptible by blue-sensitive photoreceptors of a
5		retina of the observer than by other photoreceptors of the retina.
1	2.	The safety indicator of claim 1, wherein at least one of the first safety color and
2		the second color is produced, at least in part, by a primary light source.
1	3.	The safety indicator of claim 1, wherein at least one of the first safety color and
2		the second color is produced, at least in part, by a secondary light source.
1	4.	The safety indicator of claim 1, wherein at least one of the first safety color and
2		the second color is produced, at least in part, by a combination of a primary light
3		source and a secondary light source.
1	5.	The safety indicator of claim 1, wherein the second color includes a wavelength
2		of less than about 500 nanometers.
1	6.	The safety indicator of claim 1, wherein the second color includes a wavelength
2		between about 350 nanometers and about 500 nanometers.
1	7.	The safety indicator of claim 1, wherein the second color includes a wavelength in
2		a range of about 445 nanometers.
1	8.	The safety indicator of claim 1, wherein the first safety color covers more of an
2		area visible to the observer than does the second color.
1	9.	The safety indicator of claim 1, wherein the second color covers less than about
2		thirty percent of the area visible to the observer.
1	10.	The safety indicator of claim 1, wherein the observer is a mammal.
1	, 11.	The safety indicator of claim 1, wherein the observer is a human.
1	12.	An insignium comprising:
2		a. a first safety color highly visible to an observer having ordinary color
3		vision; and
4		b. a second color more perceptible by blue-sensitive photoreceptors of a

retina of the observer than by other photoreceptors of the retina.

- 1 13. The insignium of claim 12, wherein at least one of the first safety color and the second color is produced, at least in part, by a primary light source.
  - 14. The insignium of claim 12, wherein at least one of the first safety color and the second color is produced, at least in part, by a secondary light source.
    - 15. The insignium of claim 12, wherein at least one of the first safety color and the second color is produced, at least in part, by a combination of a primary light source and a secondary light source.
- 1 16. The insignium of claim 12, wherein the insignium comprises a traffic sign.
- 1 17. The insignium of claim 12, wherein the insignium indicates a hazard.
- 1 18. The insignium of claim 12, wherein the second color includes a wavelength of less than about 500 nanometers.
  - 19. The insignium of claim 12, wherein the second color includes wavelength between about 350 nanometers and about 500 nanometers.
  - 20. The insignium of claim 12, wherein the second color includes a wavelength in a range of about 445 nanometers.
  - 21. The insignium of claim 12, wherein the first safety color covers more of an area visible to the observer than does the second color.
  - 22. The insignium of claim 12, wherein second color covers less than about thirty percent of the area visible to the observer.
    - 23. The insignium of claim 12, wherein the observer is a mammal.
  - 24. The insignium of claim 12, wherein the observer is a human.
  - 25. An article of clothing comprising:

1

2

2

- a. a first safety color highly visible to an observer having ordinary color vision; and
- b. a second color more perceptible by blue-sensitive photoreceptors of a retina of the observer than by other photoreceptors of the retina.
- 26. The article of clothing of claim 25, wherein at least one of the first safety color and the second color is produced, at least in part, by a primary light source.
- 27. The article of clothing of claim 25, wherein at least one of the first safety color and the second color is produced, at least in part, by a secondary light source.

- 28. The article of clothing of claim 25, wherein at least one of the first safety color and the second color is produced, at least in part, by a combination of a primary light source and a secondary light source.
- 1 29. The article of clothing of claim 25, wherein the article comprises a garment.
- 1 30. The garment of claim 29, wherein the garment includes headwear.
- 1 31. The garment of claim 29, wherein the garment includes footwear.
- 1 32. The garment of claim 29, wherein the garment includes legwear.
- 1 33. The garment of claim 29, wherein the garment includes a torso covering.
- 1 34. The garment of claim 29, wherein the garment includes a wearable insignium.
- 35. The article of clothing of claim 25, wherein the second color includes a
  wavelength of less than about 500 nanometers.
  - 36. The article of clothing of claim 25, wherein the second color includes a wavelength between about 350 nanometers and about 500 nanometers.
    - 37. The article of clothing of claim 25, wherein the second color includes a wavelength in a range of about 445 nanometers.
    - 38. The article of clothing of claim 25, wherein the first safety color covers more of an area visible to the observer than does the second color.
    - 39. The article of clothing of claim 25, wherein second color covers less than about thirty percent of the area visible to the observer.
    - 40. The article of clothing of claim 25, wherein the observer includes a mammal.
    - 41. The article of clothing of claim 25, wherein the observer includes a human.
  - 42. A vehicle comprising:

1

2

2

- a. a first safety color highly visible to an observer having ordinary color vision; and
  - b. a second color more perceptible by blue-sensitive photoreceptors of a retina of the observer than by other photoreceptors of the retina.
- 43. The vehicle of claim 42, wherein at least one of the first safety color and the second color is produced, at least in part, by a primary light source.
- 44. The vehicle of claim 42, wherein at least one of the first safety color and the second color is produced, at least in part, by a secondary light source.

- 1 45. The vehicle of claim 42, wherein at least one of the first safety color and the 2 second color is produced, at least in part, by a combination of a primary light 3 source and a secondary light source.
  - 46. The vehicle of claim 42, wherein at least one of the first safety color and the second color is applied to a surface of the vehicle.
  - 47. The vehicle of claim 42, wherein at least one of the first safety color and the second color is mounted on the vehicle.
  - 48. The vehicle of claim 42, wherein the vehicle includes at least one emissive light source for providing at least one of the first safety color and the second color.
  - 49. The vehicle of claim 42, wherein the vehicle includes a landcraft.
- 1 50. The vehicle of claim 42, wherein the vehicle includes a watercraft.
